Technique

Synchroniser le chant - Au Clair de la lune

C

The diagram illustrates a 24-bit TAP structure. It consists of a horizontal line representing the data bus, with 24 bits labeled above it. The bits are grouped into four sets of six bits each. The first set is labeled 'TAP' and the last set is labeled '24'. Each set of six bits is connected to a common bus line, which is represented by a vertical line segment on the left and a vertical line segment on the right, connected by a horizontal line segment at the bottom.
